

# Missouri Census Update

Missouri Census Data Center, Missouri State Library

Summer 2000

## Number of potential voters in Missouri tops four million for election 2000

**A**ccording to new projections released by the Census Bureau, Missouri will have 4,105,000 residents who are voting age by the November election, an increase of 121,000 (three percent) over the number four years ago in 1996.

Nationwide, the number of residents who will be old enough to vote this year is projected to be approximately 205.8 million, nine million more than in 1996. How many will exercise the right to vote is another question. The actual turnout reported by the clerk of the U.S. Congress for the 1996 presidential election was only 48.9 percent of the total voting-age population.

As with all estimates and projections, the numbers are not absolute. "About 93 percent of U.S. residents who are voting age are citizens, but the voting-age population also includes people age 18 years and over who are not eligible to vote, such as non-citizens, and these projections do not cover Americans living overseas, who also may vote," said Jennifer Day, a Census Bureau analyst.

### Changes since women first voted in 1920

The 2000 election represents the 21st time women will vote in a U.S. presi-

dential election. The first was in 1920 when Warren G. Harding—a Republican from Ohio—was elected. The total U.S. voting-age population (age 21 and over in 1920) numbered 60.5 million that year—31.2 million men and 29.3 million women. The voting-age population in Missouri was 2,038,814 in 1920—1,038,472 men and 1,000,342 women.

Changes during the past 80 years—advances in health care, the advent and affordability of new technology, etc.—are etched in today's demographic picture, both locally and nationally. The significant decrease in the number of women who die in

childbirth and the fact that automobile deaths have occurred at a higher rate for men than women are just two factors that combine to affect the demographic makeup of the nation today.

This year, the Census Bureau predicts that if everyone age 18 or older voted, women would represent 52 percent of the U.S. electorate, outnumbering men by nearly eight million. The total number of voting-age women will be 106.9 million, compared to a total number of 98.9 million voting-age men. Women currently surpass men in all voting-age groups except the age 18 to 24 category, where projections show 552,000 more men than women. Women have the potential to outnumber voting-age men in every state except Alaska (53 percent men) and Nevada (51 percent men).

### Changes since the last presidential election

Looking at more recent changes, California is the state that gained the most voting-age population between 1996 and 2000—a gain of nearly two million in four years. Texas and Florida followed with increases of one million

## When will Census 2000 data be available?

Now that the counting is complete and the Accuracy Evaluation Coverage Program for quality assurance is being conducted, the focus of Census 2000 is turning to one question: "When can I see the new numbers?"

By law [Title 13, United States Code], the state population counts must be delivered to the president within nine months of Census Day (on or before December 31, 2000). These counts are used to reapportion the seats in the U.S. House of Representatives. Under the Voting Rights Act, the Census Bureau is required to provide the states with race and ethnic data for small geographic areas to be used for the redistricting process specified in P.L. 94-171 by April 1, 2001. After consulting with census users and advisors, including the Department of Justice, the Census Bureau has decided to meet the needs of redistricting by providing the 63 categories of race in combination with Hispanic/Latino categories tabulated for both total population and people 18 years of age or over.

Other products will be released between June 2001 and September 2003.

## Census Data Center conference materials available

Representatives from libraries, regional planning commissions, local governments, state agencies, not-for-profit associations, and research centers attended the Missouri Census Data Center Conference in Jefferson City on July 19, 2000. Presenters focused on preparations for the release of Census 2000 data over the next three years and on a variety of Missouri-specific issues.

PowerPoint presentations from the conference are now available online at <http://www.oseda.missouri.edu/mscdc/index.html> (once there, click on "conferences"). A sampling of the presentations available includes: "Missouri Census Data Center's Plan for 2000," "MO-BIS—Missouri's Business Information Source," and "Census 2000 Redistricting Project."

## Over 13 million poor children in the U.S.

The National Center for Children in Poverty at the Mailman School of Public Health at Columbia University has released a new study, "Child Poverty in the States: Levels and Trends from 1979 to 1998." The report indicates there were 13,285,438 poor children (defined as below age 18) in the nation in 1998 and the poverty rate increased from 16.2 percent to 18.7 percent between 1979 and 1998.

The study places Missouri's child poverty rate in 1998 at 15.6 percent (approximately 215,607 children). However, as with any study, the larger the sample the more confident researchers can be about the estimate. The 90 percent confidence range for Missouri children in poverty falls anywhere between 10.3 and 20.9 percent. Nationally, the 90 percent confidence range falls between 18.0 and 19.4 percent.

Researchers analyzed annual income data from the U.S. Census Bureau's Current Population Survey and used the official measure of poverty by the Census Bureau to produce the report. In 1998, the poverty threshold for a family of four was \$16,600.

Additional information from the study is available at the National Center for Children in Poverty's website at <http://cpmcnet.columbia.edu/dept/nccp>.

### Vol. 4, No. 3 — Summer 2000

**Missouri Census Update** (ISSN 1092-9509) is published quarterly by the Office of the Secretary of State to fulfill contractual obligations to the U.S. Bureau of the Census in connection with the State Data Center Program authorized under Title 13, United States Code, Section 8(b). The newsletter is distributed to the Census Bureau, other state data centers, affiliate agencies, libraries, universities, state agencies, and other interested parties.

For more information about the newsletter or the Missouri Census Data Center, contact the MCDC Coordinator, Missouri State Library, P.O. Box 387, Jefferson City, Missouri 65102-0387; tel: 573-526-7648; <http://www.oseda.missouri.edu/mscdc/index.html>.

### Correction

The column heading that reads "1996 population estimate" on pages 6 and 7 of the Spring 2000 *Missouri Census Update* should read "1998 population estimate." Please change the 1996 to 1998 in these two cases for future reference (heading for third column of numbers on pages 6 and 7).

## Potential Missouri voters

► *continued from page 1*

and 700,000 potential voters, respectively. Nevada's voting-age population grew the fastest (16 percent), followed by Arizona (12 percent), and Texas (9 percent).

According to the projections, states with small changes in the voting-age population since the last presidential election include Pennsylvania, North Dakota, and Rhode Island, all with less than one percent growth. Washington, D.C. is projected to have had a four percent loss in voting-age population since 1996.

States where there are projected to be one million or more African Americans of voting age by November are: New York (2.3 million), California (1.9 million), Texas (1.8 million), Florida (1.6 million), Georgia (1.6 million), Illinois (1.2 million), North Carolina (1.2 million), Maryland (1.0 million) and Virginia (1.0 million). The largest number of voting-age Hispanics reside in the states of California (7.0 mil-

lion), Texas (4.0 million), New York (1.8 million), and Florida (1.8 million). States with the largest number of Asians and Pacific Islanders include: California (3.1 million), New York (789,000), Hawaii (559,000), Texas (447,000), and New Jersey (375,000).

The South is projected to have the largest voting-age population (73 million), followed by the Midwest (47 million), the West (46 million), and the Northeast (40 million). The South is projected to have had the greatest increase in voting-age population—with a gain of four million—followed by the West (three million), the Midwest (one million), and the Northeast (fewer than one million).

### The age factor

This November, approximately 40 percent of the voting-age population will be age 25 to 44. People age 65 and over, who historically have had comparatively high rates of voter participation, are expected to number 35 million—17 percent of the total voting-age population. Since the 1996

election, the 45- to 64-year-old population will have increased about 14 percent, and 18- to 24-year-olds will have increased by about eight percent. Little change is expected in the 25- to 44-year-old and 65 and over age groups.

### Race

Nationally, the voting-age population is projected to include 74 percent white non-Hispanics, 12 percent African Americans, 4 percent Asians and Pacific Islanders, and about 1 percent American Indians, Eskimos, and Aleuts. The Hispanic origin population may comprise about 10 percent of the total. The voting-age populations of Hispanics and of Asians and Pacific Islanders are expected to be 16 percent greater in November 2000 than in November 1996; however, approximately two out of five voting-age Hispanics and Asians and Pacific Islanders are not U.S. citizens.

Voting projections for all states are available on the Web at <http://www.census.gov/population/www/socdemo/voting.html>. ■

### Projections of the voting-age population in Missouri — November 2000\*

Total voting-age population in Missouri .....	4,105,000
Female voting-age population .....	2,155,000
Male voting-age population .....	1,950,000
Total age 18-24 .....	536,000
Female age 18-24 .....	267,000
Male age 18-24 .....	269,000
Total age 25-44 .....	1,588,000
Female age 25-44 .....	808,000
Male age 25-44 .....	780,000
Total age 45-64 .....	1,237,000
Female age 45-64 .....	641,000
Male age 45-64 .....	596,000
Total age 65 and over .....	746,000
Female age 65 and over .....	440,000
Male age 65 and over .....	306,000

\* Since figures released by the Census Bureau were rounded, totaling the numbers for each age group results in a combined total 2,000 above the 4,105,000 projection for Missouri.

### Back-to-school brings increased sales

Almost 70 million Americans, from kindergarten through college, will be headed to

classrooms this fall, and the associated back-to-school buying is big business. During the month of August, total sales jump about \$2 billion dollars as students buy the things they want and/or need for the new academic year. Not surprisingly, shoe and apparel stores report the biggest gains during August.

# Missouri's Complete Count Committee finishes busy year

**M**issouri's statewide Complete Count Committee for Census 2000 is in the process of conducting its final work. The committee, which was appointed by Governor Carnahan and chaired by Secretary of State Bekki Cook, met initially on August 11, 2000. At that meeting, Governor Carnahan challenged members to do all they could to promote a complete and accurate count in Missouri for Census 2000.

The committee, comprised of 22 members from across the state, represents community leaders in the areas of government, business, labor, libraries, schools, not-for-profit associations, and social services.

After drawing up a work plan and identifying areas of the state where targeted census promotion was deemed most critical, members formally requested a special appropriation of \$275,000 from the Missouri General Assembly.

The request was granted, and a Missouri-specific advertising campaign was launched by the committee and the Secretary of State's Office in March to complement the Census Bureau's nationwide media effort. Radio and cable television advertisements were produced and shown in targeted areas and where the initial mail-back response rates were lowest. These advertisements highlighted spokespersons with strong credibility among hard-to-enumerate populations.

Other Missouri-specific promotional activities conducted by the statewide Complete Count Committee, the Secretary of State's Office, and the State Library during the spring of 2000 included:

- Developed and distributed Mis-

souri-specific brochures, such as "Everyone Counts: Census 2000 in Missouri" and "Census in Libraries"

- Sent Missouri "Count Me Too: Census 2000" stickers to schools for distribution to elementary students throughout the state

- Created St. Louis- and Kansas City-specific informational flyers for distribution to students in the two school districts

- Produced a tabloid to explain the importance of the census using the words and opinions of the homeless and poor

- Purchased Census 2000 advertising in newspapers with Hispanic, Chinese, and African-American readerships

- Created Census 2000 posters to promote the census among recent immigrants and minorities in the St. Louis area

- Produced press releases, press packets, and drop-in articles to media outlets statewide

- Compiled information for a variety of networks (e.g., university student associations, senior citizen organizations, Caring Communities,

homeless shelters, soup kitchens, social service providers, libraries, schools, and state government agencies) to explain the importance of getting the people served by these organizations to participate in Census 2000

- Developed payroll stuffers for state employees

- Participated in the Census Bureau's promotional bus tour at Missouri stops

- Distributed promotional items from the Census Bureau

- Informed local and statewide organizations about Census 2000

- Offered regional training sessions for local complete count committees

As part of their final work, the committee is conducting a Census 2000 survey (see: Census 2000 survey form available on the Web on page 10) and working on a final report of activities, observations, and suggestions. The report will be submitted to the Census Bureau, the State Data Center Steering Committee, the Congressional Monitoring Board and the Missouri State Archives during the fall of 2000.

## Mail order: \$220 billion per year industry

Things have changed in the mail-order business since Montgomery Ward published the first catalog in 1872—it consisting of a single page. By 1904, the Wards catalog weighed in at four pounds and was competing with the equally famous volume from Sears and Roebuck. While mail-order buying became popular because it was so important as a way to serve sparsely settled areas, it now fits our increasingly busy lifestyle and our ever-growing diversified tastes. Today, six out of every 10 adults use mail-order catalogs and order \$220 billion worth of merchandise every year. The most popular items to order today include apparel, office supplies, sporting goods, computer hardware and software, food, and garden tools.

# Tax collection in Missouri

1998 state government tax collection files and tables contain annual statistics on the fiscal year tax collections of all 50 state governments in the nation. The tax amounts shown in the accompanying table are after tax refunds have been deducted and include state taxes collected or received by the state and subsequently distributed to local governments. Tax amounts collected and retained locally and collections for unemployment compensation "taxes" required by state governments are not included in the figures.

"Taxes" are defined as all compulsory contributions exacted by a government for public purposes, except em-

ployer and employee assessments for retirement and social insurance purposes, which are classified as insurance trust revenue. All receipts from licenses and compulsory fees, including those that are imposed for regulatory purposes, as well as those designated to provide revenue, are included. Tax revenue is further defined to include related penalty and interest receipts of a government, but to exclude protested amounts and refunds. The deduction from gross collections of amounts refunded is particularly significant with respect to motor fuel (gasoline) sales taxes and individual income taxes. The general nature of the sever-

al major kinds of taxes shown separately in this report is suggested by their headings.

Most of the data in this report were gathered by a mail canvas of appropriate state government offices that are directly involved with state-administered taxes. In some instances, data were compiled by trained representatives of the Bureau of the Census from official state government records. In either case, the classification of taxes among the different categories shown is entirely the responsibility of the Census Bureau, and might not reflect the actual classification or presentation used by the various state government respondents.

## World Wide Web celebrates birthday

The World Wide Web was born 10 years ago, in the summer of 1990. It was the brainchild of two employees of the Cern Laboratory in Switzerland—Robert Cailliau and Tim Berners-Lee, who called it an "embodiment of human knowledge." Although the Web was seen as a novelty a few years ago, it is considered a necessity today for businesses, educational institutions, and many other organizations and individuals. Currently, the U.S. tops all nations in the number of computers available (approximately one for every three people), with Switzerland, Australia, and Norway not far behind. About one-third of American adults have access to the Internet.

\*Some 1990 population estimates adjusted

**NOTE:** The 1999 population estimates are based on 1990 census population totals revised to reflect legal boundary changes reported nationwide during the 1998 Boundary and Annexation Survey. In that survey, local governments were asked to report their boundaries that were legally in effect as of January 1, 1998. For the first time since the 1990 census, the survey included all functioning governmental units.

In addition, a geo-processing system was developed to estimate the impact of annexations, de-annexations, or governmental mergers on the 1990 base populations. In general, increases or decreases in land area were accompanied by corresponding changes in the estimated 1990 base populations of each governmental unit. In other instances, 1990 population increases or decreases in areas with few or insignificant boundary changes reflected improvements in the geographic assignment capabilities of the Census Bureau's TIGER® System. Where governmental units were merging, their respective 1990 base populations were combined. 1990 base populations also were estimated for new governmental units. The 1990 base populations of incorporated places or townships that dissolved after the 1990 census were retained within the higher-level entities in which these governmental units formerly existed. Finally, changes to governmental unit names and other geographic code identifiers were captured to enable accurate representation of these governmental units in the estimates tables.

## Census 2000 survey form available on the Web

Missouri's statewide Census 2000 Complete Count Committee is conducting a survey to assess the public's level of satisfaction with Census 2000 efforts in Missouri. The survey asks respondents to provide feedback in the areas of Census 2000 promotion, hiring, and operations, as well as to provide written impressions and suggestions. The results of the survey will be reported to the U.S. Census Bureau and the Congressional Monitoring Board for Census 2000 this fall when the statewide committee submits its overall analysis of Census 2000 in Missouri.

The survey is open to all Missouri residents and can be completed and transmitted on the Web from the Secretary of State's homepage at <http://mosl.sos.state.mo.us>. Paper copies of the survey are available upon request from the Missouri State Library's Census Data Center at 800-325-0131, ext. 10, or 573-526-7648.

# Web tool for historical statistics

**S**tatistics from the first United States census conducted in 1790 and for every subsequent census through 1970 are available on the University of Virginia's website at <http://fisher.lib.virginia.edu/census>. Detailed county, state, and national data are contained in this easily-accessed collection. Included is extensive information about the social and political character of the United States, including breakdowns of population by race, nationality, families, education, occupation, religion, and general economic conditions.

This site is made possible with the cooperation and consent of the Inter-university Consortium for Political and Social Research (ICPSR) in Ann Arbor, Michigan. The data were collected, keypunched, and checked for

errors by ICPSR staff under a grant from the National Science Foundation. The selection of information to be included in the data set was carried out under guidelines developed by the American Historical Association. Sources for the complete data set include decennial censuses as well as information from the U.S. Department of Agriculture and the Survey of Churches and Church Membership. Although not complete over the full time span of this study, statistics are provided for such diverse subjects as total numbers of newspapers and periodicals, total capital invested in man-

ufacturing, total numbers of educational institutions, total number of churches, taxation by state, and land surface area in square miles.

Listed below are the types of questions that can be answered using the website:

◆ *How many university students were enrolled in Missouri in 1840?*

Missouri had a total of 495 university students in 1840; the nationwide total for that year was 16,009.

◆ *How many male slaves, age five through nine, lived in Missouri in 1860?*

Census records indicate there were 9,547 male slaves age five through nine who lived in Missouri in 1860. Out of that number, six lived in Adair County, 108 lived in Cape Girardeau County, and 316 lived in Cooper County.

◆ *Compared with the average farm size in Missouri today of 292 acres, what was the average size of a Missouri farm at the turn of the century in 1900?*

The average farm size in Missouri in 1900 was 119 acres.

◆ *What percentage of people age 14-17 in Jackson County, Missouri, were enrolled in school in 1960?*

85 percent of people age 14-17 in Jackson County, Missouri, were enrolled in school in 1960.

## State and local government employment up 1.5 percent

Tabulations from the Census Bureau's 1999 *Annual Survey of State and Local Government Employment and Payroll* show that state and local governments employed 14.7 million full-time equivalent workers nationwide in 1999, 1.5 percent more than in 1998. Local governments employed 10.7 million employees; state governments employed 4.0 million.

Most full-time equivalent employees worked in education (7.6 million), hospitals (952,000), and police protection (849,000). Other employment categories in the survey include: corrections, streets and highways, public welfare, health, judicial-legal, financial/administration, and fire protection.

The survey indicates that state government in Missouri had 110,243 employees in 1999 (92,543 were full-time equivalent) and had a total monthly payroll of \$227,799,522 in March 1999. Payroll amounts represent gross payrolls for the one-month period of March (31 days and includes all salaries, wages, fees, commissions, bonuses, or awards paid to employees during the pay period that included the date of March 12). Payroll amounts reported for a period other than one month were converted to represent an amount for the month of March.

Information and tables from the survey are posted on the Web at <http://www.census.gov/govs/www/apes99.html>.

# More than 40 million people in the nation moved last year

A Census Bureau report, "Geographic Mobility: March 1998 to March 1999," estimates that approximately 43 million U.S. residents—16 percent of the population—moved to a new residence between March 1998 and March 1999.

A majority (59 percent) of the people who came, relocated within the same county; 20 percent moved to another county within the same state; 18 percent moved to a different state; and

three percent moved to the United States from abroad.

Renters were far more likely to move than homeowners—approximately one out of three renters moved, compared with fewer than one out of 10 homeowners. The report also shows the extent to which moving rates decline as householders age—32 percent of people in their 20s moved, compared to only five percent of those age 65 and over.

Of the three percent (1.4 million people) of movers who came to the United States from abroad, 40 percent were white, 32 percent were Hispanic, 22 percent were Asian or Pacific Islander, and 7 percent were African American. (Note: data by race does not include individuals of Hispanic origin, most of whom are white.)

The report also shows that the Northeast had the lowest moving rate among the nation's regions (12 percent), followed by the Midwest (15 percent), the South (17 percent), and the West (19 percent).

Data are from the March 1999 Current Population Survey. Both an overview and detailed tables from the report are available on the Census Bureau's website at <http://www.census.gov/population/www/socdemo/migrate.html>. The detailed tables provide statistics for characteristics of movers such as age, sex, race, Hispanic origin, educational level, occupation, and income. Also included are data on the characteristics of those making particular moves, such as from the Northeast to the South or from suburbs to central cities.
